ORCHIDACEAE  
*Corallorhiza maculata* Raf.  
Coma3

Pacific coral root, spotted coral root, large coral root

**FORM:** Stout, purplish, parasitic forb, 20-40cm (8-16in) tall from much branched rhizome.

**STEMS:** Erect, glabrous, reddish, brownish, yellowish (albino forms) or purplish with several alternate bracts, but lacks green leaves.

**FLOWERS:** 10-30 flowers, in a widely spreading raceme; perianth reddish-purple to pinkish, with a poorly developed spur (1), white lip strongly wine-red spotted (2); May-Aug.

**FRUIT:** Nodding, ovoid capsule, 1-2cm (1in) long.

**SIMILAR SPECIES:** *Corallorhiza Conspectus*, p.126.

**NOTES:** Albino plants quite common. *Corallorhiza* and common name coral root is derived from the coral-like formation of their roots.
