ORCHIDACEAE
Habenaria unalascensis (Spreng.) Wats.
Haun

Alaska rein-orchid

FORM: Glabrous, deciduous, perennial forb, 20-60cm (8-24in) tall, from fleshy-fibrous roots with 1-3 rounded tubers.

STEMS: Single, leafy at base, bracteate above.

LEAVES: Basal cluster of 2-4 simple, entire, oblanceolate to lanceolate leaves, 8-15cm (3-6in) long, withering before or during flowering.

FLOWERS: Numerous, fragrant, white, greenish or yellowish green, spirally arranged in a narrow, rather densely flowered raceme, 10-40cm (4-12in) long, 3-merous with a short narrowly cylindrical spur, 3-8mm long; late June-Aug.

FRUIT: Erect, ellipsoid capsule up to 10mm long.

SIMILAR SPECIES: *Habenaria Conspectus*, p.142

HABITAT: Dry woods to gravelly streambanks and open mountain sides.
